Dedication

This book is dedicated to Edward Keenan who left a profound influence on mathematics education in New York State and on the development of Amsco texts.

Ann Xavier Gantert

This author has been associated with mathematics education in New York State as a teacher and an author throughout the many changes of the past fifty years. She has worked as a consultant to the Mathematics Bureau of the Department of Education in the development and writing of Sequential Mathematics and has been a coauthor of Amsco’s Integrated Mathematics series, which accompanied that course of study.

Reviewers:

Steven Balasiano
Assistant Principal, Mathematics
Canarsie High School
Brooklyn, NY

Debbie Calvino
Mathematics Chairperson
Valley Central High School
Montgomery, NY

Donna Getchell
Mathematics Teacher
Garden City High School
Garden City, NY

Sal Sutera
Mathematics Teacher
New Utrecht High School
Brooklyn, New York

Integrated Algebra 1 is a new text for high school algebra that continues the approach that has made Amsco a leader in presenting mathematical ideas in a contemporary, integrated manner. Over the past decades, this approach has undergone numerous changes and refinements to keep pace with ever changing technology.

This Amsco book uses an integrated approach to the teaching of high school mathematics that is promoted by the National Council of Teachers of Mathematics in its *Principles and Standards for School Mathematics* and mandated by the New York State Board of Regents in the *New York State Mathematics Core Curriculum*. This text presents a range of materials and explanations that are guidelines for achieving a high level of excellence in the study of mathematics.

In this book:

✔ **The graphing calculator** is introduced and used throughout the book as a routine tool in the study of mathematics. Underlying mathematical concepts and procedures are clearly presented, stressing calculator use as a learning and computational aid.

✔ **The real number system** is fully developed, to help students understand and correctly interpret technological limitations such as the calculator displays of rational approximations. The role of precision and accuracy, in determining acceptable computational results, is carefully explained and illustrated.

✔ **Application** of algebra to the solution of problems from geometry, probability, statistics, finance, and other real-world applications is developed throughout the text.

✔ **Enrichment** is stressed throughout the text and in the Teacher’s Manual where multiple suggestions are given for teaching strategies, for further explorations of related topics, and for alternative assessment. The text, as well as the Manual, includes opportunities for cooperative learning, hands-on activities, extended tasks, and independent investigation. Reproducible *Enrichment Activities* for each chapter provide both material for review and reinforcement as well as for in-depth study.
Exercises are divided into three categories. Writing About Mathematics provides questions in which students are asked to contrast, compare, evaluate, and justify their own ideas or those of others. These questions help students incorporate the tools of the performance indicators—investigate, explore, discover, conjecture, reason, justify, explain, prove, and apply—into their study of mathematics. These questions also provide a valuable source of material for classroom discussion or for inclusion in a student portfolio. Developing Skills provides routine practice exercises that enable the student and the teacher to evaluate the student’s ability to both manipulate mathematical symbols and understand mathematical relationships. Applying Skills provides exercises in which the new ideas of each section, together with previously learned skills, are used to solve problems that reflect real-life situations.

Conceptual understanding, procedural fluency, and problem solving, which are the primary goals of the Core Curriculum are addressed throughout the text. General concepts and principles are fully addressed and developed in detail, then further explored in the examples and exercise sections. The Procedures throughout the text explain how to perform both arithmetic and geometric processes. The Examples given in each section demonstrate problem solving approaches, often presenting alternative strategies for solution. Both routine and non-routine problems are presented.

The material in this text is intended to present basic algebra and its relationship to other branches of mathematics. The text aims at developing mathematics as a unified whole in which each branch of mathematics is integrally related. Many of the concepts presented in this text have been introduced in previous mathematics courses. The text provides the opportunity for students to review familiar material that is the foundation for the development of new topics, and presents all the material needed to develop the skills and achieve the goals suggested in the New York State Core Curriculum for Integrated Algebra.

An intent of the author was to make this text of greatest service to the average student. However, the materials for reinforcement and for enrichment that the text contains make it appropriate for varying abilities. Specifically:

- Concepts are carefully developed using appropriate language and mathematical symbolism.
- General principles and procedures are stated clearly and concisely.
- Numerous solved examples serve as models for students, with detailed step-by-step explanations.
- Abundant and varied exercises develop skills and test understanding. Additional enrichment activities challenge the most capable student.

This text is offered so that teachers may effectively continue to help students to comprehend, master, and enjoy mathematics.

## Chapter 3
### ALGEBRAIC EXPRESSIONS AND OPEN SENTENCES 88

- **3-1** Using Letters to Represent Numbers 89
- **3-2** Translating Verbal Phrases Into Symbols 91
- **3-3** Algebraic Terms and Vocabulary 95
- **3-4** Writing Algebraic Expressions in Words 98
- **3-5** Evaluating Algebraic Expressions 100
- **3-6** Open Sentences and Solution Sets 104
- **3-7** Writing Formulas 107

**Chapter Summary** 111
**Vocabulary** 111
**Review Exercises** 111
**Cumulative Review** 114

## Chapter 4
### FIRST DEGREE EQUATIONS AND INEQUALITIES IN ONE VARIABLE 116

- **4-1** Solving Equations Using More Than One Operation 117
- **4-2** Simplifying Each Side of an Equation 122
- **4-3** Solving Equations That Have the Variable in Both Sides 128
- **4-4** Using Formulas to Solve Problems 134
- **4-5** Solving for a Variable in Terms of Another Variable 142
- **4-6** Transforming Formulas 143
- **4-7** Properties of Inequalities 146
- **4-8** Finding and Graphing the Solution Set of an Inequality 151
- **4-9** Using Inequalities to Solve Problems 157

**Chapter Summary** 161
**Vocabulary** 162
**Review Exercises** 162
**Cumulative Review** 164

## Chapter 5
### OPERATIONS WITH ALGEBRAIC EXPRESSIONS 167

- **5-1** Adding and Subtracting Algebraic Expressions 168
- **5-2** Multiplying Powers That Have the Same Base 173
- **5-3** Multiplying by a Monomial 177
- **5-4** Multiplying Polynomials 183
- **5-5** Dividing Powers That Have the Same Base 186
- **5-6** Powers with Zero and Negative Exponents 188
- **5-7** Scientific Notation 191
- **5-8** Dividing by a Monomial 197
Chapter 6
RATIO AND PROPORTION 207
6-1 Ratio 208
6-2 Using a Ratio to Express a Rate 212
6-3 Verbal Problems Involving Ratio 214
6-4 Proportion 216
6-5 Direct Variation 222
6-6 Percent and Percentage Problems 227
6-7 Changing Units of Measure 234
Chapter Summary 238
Vocabulary 239
Review Exercises 239
Cumulative Review 242

Chapter 7
GEOMETRIC FIGURES, AREAS, AND VOLUMES 245
7-1 Points, Lines, and Planes 246
7-2 Pairs of Angles 250
7-3 Angles and Parallel Lines 258
7-4 Triangles 262
7-5 Quadrilaterals 272
7-6 Areas of Irregular Polygons 279
7-7 Surface Areas of Solids 282
7-8 Volumes of Solids 286
Chapter Summary 293
Vocabulary 294
Review Exercises 294
Cumulative Review 297

Chapter 8
TRIGONOMETRY OF THE RIGHT TRIANGLE 300
8-1 The Pythagorean Theorem 301
8-2 The Tangent Ratio 307
8-3 Applications of the Tangent Ratio 313
# Contents

- **8-4** The Sine and Cosine Ratios
- **8-5** Applications of the Sine and Cosine Ratios
- **8-6** Solving Problems Using Trigonometric Ratios

Chapter Summary
Vocabulary
Review Exercises
Cumulative Review

## Chapter 9

**GRAPHING LINEAR FUNCTIONS AND RELATIONS**

- **9-1** Sets, Relations, and Functions
- **9-2** Graphing Linear Functions Using Their Solutions
- **9-3** Graphing a Line Parallel to an Axis
- **9-4** The Slope of a Line
- **9-5** The Slopes of Parallel and Perpendicular Lines
- **9-6** The Intercepts of a Line
- **9-7** Graphing Linear Functions Using Their Slopes
- **9-8** Graphing Direct Variation
- **9-9** Graphing First-Degree Inequalities in Two Variables
- **9-10** Graphs Involving Absolute Value
- **9-11** Graphs Involving Exponential Functions

Chapter Summary
Vocabulary
Review Exercises
Cumulative Review

## Chapter 10

**WRITING AND SOLVING SYSTEMS OF LINEAR FUNCTIONS**

- **10-1** Writing An Equation Given Slope and One Point
- **10-2** Writing an Equation Given Two Points
- **10-3** Writing an Equation Given the Intercepts
- **10-4** Using a Graph to Solve a System of Linear Equations
- **10-5** Using Addition to Solve a System of Linear Equations
- **10-6** Using Substitution to Solve a System of Linear Equations
- **10-7** Using Systems of Equations to Solve Verbal Problems
- **10-8** Graphing the Solution Set of a System of Inequalities
