

Superintendent Highlight of the Week

November 14, 2013

Students taking Algebra this year can count on additional support towards success as a result of the outstanding work of two of POB's finest mathematics teachers. Rob Cutajar and Claude Szajna, seasoned mathematics teachers with over forty years combined experience in teaching in our schools, have developed a support website to help students review and reinforce their work. What is even more remarkable is that they have donated **free** access to all of the districts' Algebra students.

As two teachers who study and enjoy math for life, they felt the desire to have others feel the same way about mathematics. Mr. Cutajar and Mr. Szajna felt that most students would benefit from a quality mathematics website that would speak to them in a manner they could fully understand and truly learn from. They created www.mathrightnow.com so students could move along at a pace which they felt comfortable, while continually reinforcing quality mathematics. The site allows students the opportunity to extend the school math day, with practice at home or anywhere they connect to the internet, while receiving immediate reward and/or remediation.

In a year when students are challenged to prepare for two assessments in Algebra, this is a tremendously generous gift from two dedicated members of our staff. We speak with One Voice for Excellence from our students, parents, staff and Board of Education in extending effusive gratitude for this valuable resource.

**Thank you Mr.
Cutajar and
Mr. Szajna**
